Version	2			
Environmental Management System		Environmental Policy	Date:	13.02.2018
			Review Due:	01.03.2019

Müller UK & Ireland Group LLP acknowledge that we all rely on the natural environment to provide us with the things we need to live healthy and happy lives; food, fuel, clean air, water and a healthy environment in which to live. Our aim is to ensure our continued business growth is realised through responsible and environmentally sustainable practices.

We will ensure compliance with environmental regulations and laws and that codes of best practice are regarded as minimum standards for our environmental performance. Consideration for the environment is integrated into our decision making processes and we work closely with our customers and suppliers to drive continuous improvements in our environmental performance.

We recognise that commercial sustainability depends on environmental and social responsibility and commit to protecting the environment, preventing pollution and continual environmental improvements. Our Environmental Management System provides us with an effective means for identifying, managing and realising environmental improvements and is able to adapt to the dynamic nature of our business.

The Dairy Roadmap is an industry wide strategy developed to reduce the dairy industry's environmental impact, and we fully support its ambitions and targets. To achieve these ambitious goals we will work with our customers and suppliers to reduce the environmental impact of our products and operations and focus on the following areas:

Water and effluent

We will continue to increase water efficiency through reductions, recovery and reuse taking the strain off local water sources.

Packaging and raw materials

We continue to improve both the performance and functionality of our packaging working towards its optimisation to minimise packaging and food waste.

Energy

We look to reduce our reliance on finite fossil fuels through the reduction of energy use and the exploration of renewable opportunities.

Transport

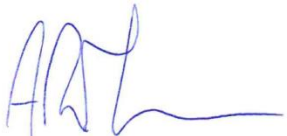

We aim to be a future thinking company by continuing to adopt cleaner and more fuel-efficient transportation practices.

Waste

We aim to eliminate all avoidable solid and liquid waste at our sites and within our supply chain.

Embedding and Educating

We will encourage environmental best practice amongst our employees, through training, awareness, policies and procedures.
